

COLOMBO 36 OIL

Technical Informations

WHAT IS IT

The COLOMBO® FILTRO PULCINO® FILTER is made up of a special electric pump and a filtering system called liquid system with pressed sheets. This particular type of filtering allows to obtain excellent levels of purification of vegetable oil without altering the fundamental characteristics of the decanted liquid; for this reason it is particularly appreciated for domestic filtering, but also in the professional sector.

HOW WORKS

The liquid ring pump obtains the suction capacity by simply filling the pump body through one of the hose holders. the suction capacity is active on both directions of rotation.

WHAT LIQUIDS CAN HANDLE

It is possible to use the filter for the clarification of olive oil and all vegetable oils in general.

SERVICE

Normal maintenance requires few and simple interventions, as if it were a normal household appliance. After use, pour clean water to rinse the internal surfaces of the pump. The electric motor requires no maintenance, there are no parts to lubricate. The external parts must be cleaned with a slightly damp sponge, and then dried immediately with a cloth.

FEATURES

Weight Kg. 35
Dimensions mm 1000 x 270 h 800
Diameter of the fittings mm 20
